

CS3316强化学习课程项目

2025年2月28日 饮水思源。爱国荣校

任务介绍

- IsaacGym-based Robot Learning Projects
 - RMA on quadrupeds
 - Humanoid Locomotion
- ・王者荣耀开悟(1v1)
- RFT on LLMs
- ・ 自选问题或环境 (RL相关)
 - 问题设定、预期方案
 - 请在3月4日前联系助教

单人项目要求

评价标准:

* 任务环境/完成度

提交方式:

提交内容:

- 正文长度4-6页
- Methods/Eval/Contrib...
- 代码压缩包

RMA for quadrupeds

RMA for quadrupeds

Rapid Motor Adaptation (RMA) is the baseline

Based on legged_gym

https://github.com/leggedrobotics/legged_gym

- You need to beat RMA in any of the aspects:
 - Overall Perf in varied terrains
 - Overall Perf in varied envs (mass, fric)
 - Learning efficiency in RL
- Some hints:
 - Improve RMA's z_t
 - Improve learning pipeline
 - Learning from real world (real2sim)
 - Tune rewards (not recommended)
- Experiments in simulation is enough
- Real-world onboarding is BONUS!
 (We have Unitree A1 quadrupedal robots)

Humanoid Locomotion

Humanoid Locomotion

- Based on HumanoidVerse
 https://github.com/LeCAR-Lab/HumanoidVerse
- Baseline: Upper body fixed
- Goal: Upper body unfixed
- Little Bonus: Humanoid locomotion with upper body motions
- Experiments in simulation is enough
- Real-world onboarding is BONUS
- We have H1, G1 for onboarding

王者荣耀开悟

- 2-Player Competitive Game 1v1
- 双方控制一个游戏角色摧毁敌方基地即可获得胜利
- 2-3人一组

王者荣耀开悟

·提供了简单的PPO算法实现, 每个agent通过self play方式进 行训练,请基于已有代码,对模 型训练效果进行改进。

Evaluation:对baseline胜率或天梯赛

Reinforcement Fine-Tuning LLMs

- 推荐框架&Baseline: https://github.com/hkust-nlp/simpleRL-reason
- 通过改进RFT算法/架构,使得LLM在Math Reasoning上提升表现
- 需要有RL层面上的novelty,如算法、训练架构等
- Hint:
 - Baseline = Qwen2.5-Math+PPO RFT
 - Implement GRPO over PPO, do ablations
- 本课程可提供阿里云平台算力

自选项目要求

前期要求:

- 提交说明文档
 - 问题设定预期方案
- ・ RL相关!

提交、评价方式:

• 和可选方案一致

额外说明

- 除自选项目外每个题目会提供简单baseline,只要各组实验结果超过baseline、mini paper和代码完整提交、过程符合学术诚信标准就可以获得大量基础分
- ◉ 机器人/狗、王者选题最好能提供视频(海报展示时)
 - Simply High Reward != High Performance
- 鼓励大家锻炼学术技能和创新性探索,不注重模型绝对性能

注意要点

- 课后确定问题后于3月7日前填写选题表格
- ◉ 自选课题组3月7日前提交前期说明文档
- **◎ 个人项目-第7周末**(4月6日24:00)前提交paper和代码附件
- 预计第8周举行模型和结果的答辩
